Hit N Mix Com Serial Cables

First, install printer driver (SRP-275C) with serial cable connected, and test print.. Self-Test sheet from the printer shows you baud rate 9600 by default, so check the com2 port's property to make sure its baud rate is also 9600.. Master (device1) should connecto with PC and Slave (device2) with printer. Second, Print on LM048 (wireless)Once make sure the printer works perfect with the cable, unplug serial connection and connect LM048 devices.. It should print properly with serial cable If it prints unreadable garbage through cable, most probably communication speeds between PC & printer mismatch; check the baud rate on PC & printer.
